

AJAJAJ or AI? Artificial Intelligence in cardiovascular medicine

AJAJAJ czy AI? Sztuczna inteligencja w medycynie sercowo-naczyniowej

1. IMPRINT

Academic Year	2026/2027
Department	Faculty of Medicine
Field of study	Medicine
Main scientific discipline	Medical sciences
Study Profile	General academic
Level of studies	Uniform MSc
Form of studies	Full time studies
Type of module / course	Non-compulsory (optional)
Form of verification of learning outcomes	Completion
Educational Unit / Educational Units	Zakład Informatyki Medycznej i Telemedycyny ul. Litewska 14/16, 00-581 Warszawa, pokój 317, III piętro tel. (+48) 22 116 92 44, (+48) 22 116 92 43, http://zimit.wum.edu.pl/ e-mail: zimt@wum.edu.pl
Head of Educational Unit / Heads of Educational Units	Dr hab. n. med. Andrzej Cacko
Course coordinator	Lek. Jakub Rokicki jakub.rokicki@wum.edu.pl
Person responsible for syllabus	Lek. Jakub Rokicki jakub.rokicki@wum.edu.pl
Teachers	Lek. Jakub Rokicki jakub.rokicki@wum.edu.pl

2. BASIC INFORMATION

Year and semester of studies	I-III year, winter & summer semester	Number of ECTS credits	2.00
------------------------------	--------------------------------------	------------------------	------

FORMS OF CLASSES	Number of hours	ECTS credits calculation
Contacting hours with academic teacher		
Lecture (L)		
Seminar (S)	30 (e-learning)	1.20
Classes (C)		
e-learning (e-L)		
Practical classes (PC)		
Work placement (WP)		
Unassisted student's work		
Preparation for classes and completions	20	0.80

3. COURSE OBJECTIVES	
O1	Build a foundational understanding of AI concepts and methods
O2	Apply and critically evaluate AI in cardiovascular contexts
O3	Integrate ethical, clinical, and translational perspectives on AI

4. STANDARDS OF LEARNING – DETAILED DESCRIPTION OF EFFECTS OF LEARNING	
Code and number of the effect of learning in accordance with standards of learning	Effects in the field of: <i>(in accordance with appendix to the Regulation of Minister of Science and Higher education from 29th of September 2023)</i>

Knowledge – Graduate*
knows and understands:

B.W23	basic IT and biostatistical tools used in medicine;
B.W24	basic methods of statistical analysis used in population and diagnostic studies;
B.W25	the potential of modern telemedicine as a tool to assist the doctor;
B.W26	principles of research for the advancement of medicine.
D.W19	the fundamentals of evidence-based medicine;
G.W1	methods for assessing the health of individuals and populations, measures and principles of monitoring the health of populations, systems of classifying diseases and medical procedures
G.W2	determinants of diseases, methods of identifying and examining disease risk factors, advantages and disadvantages of epidemiological research and principles of cause-and-effect inference in medicine
G.W6	legal regulations regarding the organization and financing of the health care system, the provision of health services financed from public funds and the principles of organizing healthcare entities, the principles of operation of information and communication tools and services in health care (e-health);

G.W8	legal regulations regarding medical experiments and conducting scientific research involving humans
Skills– Graduate* is able to:	
B.U8	use medical databases and correctly interpret the information they contain to solve problems in basic and clinical sciences;
B.U9	select an appropriate statistical test, carry out basic statistical analyses and use appropriate methods to present the results;
B.U10	classify scientific research methodology, including distinguishing between experimental and observational studies with their sub-types, ranking them according to the reliability of the results provided and correctly assessing the strength of scientific evidence;
B.U11	plan and carry out scientific research and interpret the results and formulate conclusions;
C.U12	seek reliable information on medicinal products, with particular reference to the summary of product characteristics (SmPC) and databases;
D.U5	critically analyse medical literature, including literature in English, and draw conclusions;
E.U20	provide health services using available IT systems or communication systems used in health care;
G.U6	issue medical certificates and medical opinions, prepare opinions for the patient, authorized bodies and entities, prepare and maintain medical records (in electronic and paper form) and use information and communication tools and services in health care (e-health);

* In appendix to the Regulation of Minister of Science and Higher education from 29th of September 2023 „graduate”, not student is mentioned.

5. ADDITIONAL EFFECTS OF LEARNING (non-compulsory)	
Number of effect of learning	Effects in the fields of:
Knowledge – Graduate knows and understands:	
K1	the fundamental concepts of artificial intelligence, machine learning, and deep learning, including their relevance to cardiovascular medicine
K2	the main applications of AI in cardiology (imaging, ECG analysis, wearables, heart failure management) and their clinical potential
K3	the limitations, risks, and ethical issues of implementing AI in healthcare, such as bias, explainability, and patient safety.
Skills– Graduate is able to:	
S1	search, interpret, and synthesize information from medical databases and scientific literature to assess AI innovations in cardiology
S2	critically evaluate AI-based prediction models and research studies using methodological frameworks (e.g., PROBAST, TRIPOD)
S3	propose practical ways of integrating AI solutions into clinical workflows while considering real-world constraints
Social Competencies – Graduate is ready for:	
SC1	adopting a reflective and responsible approach to using AI in medicine, prioritizing patient welfare and trust.
SC2	collaborating with interdisciplinary teams (clinicians, data scientists, engineers) to implement AI-driven solutions in cardiology.
SC3	engaging in continuous learning to keep pace with emerging AI technologies and their evolving role in medical practice.

6. CLASSES		
Form of class	Class contents	Effects of Learning
Seminar	Introduction to AI, ML, and DL: What Every Doctor Needs to Know Demystifying the terminology: AI vs. ML vs. DL. Overview of supervised, unsupervised, and reinforcement learning. The paradigm shift of Foundation Models.	B.W23, B.W24, B.W26, D.W19, D.U5, B.U10
	How Machines Learn: Data, Features, and Model Training Understanding data types (numerical, categorical). The concept of features and feature engineering. Introduction to model training, validation, and testing. The problems of overfitting and underfitting	B.W23, B.W24, B.U9, B.U10, D.U5
	Deep Learning and Neural Networks: The Power of Depth From the Perceptron to Multi-Layer Perceptrons (MLPs). How deep neural networks (DNNs) automatically learn features. Introduction to Convolutional Neural Networks (CNNs) for images and Transformers for language	B.W23, B.W24, B.W26, D.U5
	AI for Cardiovascular Imaging: Seeing the Unseeable AI applications in echocardiography (view classification, quality assessment), cardiac CT/MRI (segmentation, calcium scoring), and coronary OCT. Introduction to the Segment Anything Model (SAM) and its potential.	B.W23, B.W24, B.U9, B.U10, D.U5, E.U20, G.W6
	The AI-Enhanced Electrocardiogram (ECG) Moving beyond rule-based analysis. Using DL to detect low ejection fraction, hypertrophic cardiomyopathy, and atrial fibrillation from a simple ECG. Pitfalls: adversarial attacks and lack of explainability	B.W23, B.W24, B.U9, B.U10, D.U5, E.U20, G.W6
	Statistical Shape Modelling: The Geometry of Heart Disease How Principal Component Analysis (PCA) is used to create statistical models of heart anatomy. Tracking disease trajectories (e.g., hypertensive heart disease, HCM) and predicting outcomes (e.g., CRT response).	B.W24, B.W23, B.U9, D.U5
	AI in Heart Failure: Diagnosis, Phenotyping, and Management Using AI for early detection of HFpEF/HFrEF from ECGs and EHRs. Phenomapping patients into subgroups with different prognoses and treatment responses. AI for optimizing guideline-directed medical therapy (GDMT).	B.W23, B.W24, B.U9, B.U10, D.W19, D.U5, G.W2, G.W1, E.U20
	Wearables and Sensors: Cardiology in the Real World Overview of sensor types (ECG, PPG, accelerometer). The transition from consumer gadgets to regulated medical devices. Use cases: AF screening, heart failure decompensation monitoring	B.W25, E.U20, G.W6, G.U6, B.W23, B.U8
	Discriminative vs. Generative AI: Diagnosis vs. Creation Discriminative models (e.g., for classification) vs. Generative models (e.g., for creating synthetic data). How generative AI can solve data scarcity and privacy issues but risks memorization and bias	B.W23, B.W26, D.W19, D.U5, G.W6, G.W8
	How to Critically Appraise an AI-Based Prediction Model Introduction to the PROBAST+AI and TRIPOD+AI frameworks. Key questions: Is AI needed? Is the data representative? Was overfitting avoided? Is the model fair and open?	B.W24, B.U9, B.U10, D.W19, D.U5, G.W2, B.W26
	The Challenge of Foundation Models and Multimodal AI The promise and perils of large models like GPT-4V. Their emergent	B.W23, B.W26, D.W19, D.U5, G.W6, G.W8

	abilities and current limitations in understanding space, time, and clinical context. The concept of "hallucination".	
	Evaluating AI in Practice: From Bench to Bedside Why many AI models never leave the lab. The importance of human-centered design, clinical workflow integration, and real-world validation (RCTs). The story of IBM Watson.	B.W26, B.U11, B.U10, D.W19, G.W2, G.W6, E.U20, G.W1
	Ethics, Trust, and Responsibility in Medical AI Algorithmic bias and fairness (e.g., performance disparities across ethnicities). Explainability vs. accuracy. The EU guidelines for Trustworthy AI. Accountability and regulatory oversight.	G.W6, G.W8, D.W19, D.U5, G.W1, G.W2
	The Future Doctor: Augmented, Not Replaced Exploring the doctor-patient relationship in the age of AI. AI for administrative tasks, informed consent, and patient communication. The future of AI in clinical trials (endpoint adjudication, digital biomarkers).	E.U20, G.U6, B.W25, G.W6, D.W19
	Course Wrap-Up and Final Project Presentations Synthesis of key course themes. Student presentations of their final projects.	B.U11, D.U5, B.U10, B.U8

7. LITERATURE

Obligatory

1. Presentation and materials provided during the classes
2. Nicolas Duchateau, Andrew P. King AI and Big Data in Cardiology. A practical guide. Springer Cham 2023

Supplementary

P. Presbitero, M. Chiarito, A. G. Levra The First Steps of Artificial Intelligence in Cardiology: Will We Still Need Cardiologists?

8. VERIFYING THE EFFECT OF LEARNING

Code of the course effect of learning	Ways of verifying the effect of learning	Completion criterion
K1, K2, K3	Watching seminars with subsequent solving tasks and tests provided during the classes	80% points
S1, S2, S3	Assessments of tasks and tests provided during the course	Providing responses on time
SC1, SC2, SC3	Individual marking of the participants	Attendance

9. ADDITIONAL INFORMATION

1. Classes are held as e-classes: an asynchronous online e-learning course on the WUM e-learning platform (use of distance learning techniques).
2. Materials are published on the platform www.e-learning.wum.edu.pl. Each student is asked to check before the course whether they can log on to the WUM Platform. In case of problems, please contact the person responsible for the course: Jakub Rokicki (jakub.rokicki@wum.edu.pl).
3. The course is delivered in the summer semester of the academic year 2026/2027. After the course is opened, the student will have access to the course: "AJAJAJ or AI. Artificial Intelligence in cardiovascular medicine 2026/2027". After accessing the course, the student is required to read the detailed information in the course. Watching all seminars is mandatory to proceed to tests.

4. The course should be started within 4 weeks of the opening of the course. Completion of the last assignments in the course should take place no later than the end date of the course, i.e. 31.01.2027 (winter) and 13.06.2027 (spring).
5. Closing date of the course: 31.01.2027 winter, 13.06.2027 spring semester.
6. Maximum number of students: 60. Minimum number of students required to run the course: 20.
7. Continuous contact with the tutor via e-mail is possible during the course: Jakub Rokicki (jakub.rokicki@wum.edu.pl).
8. At the Department there is a Students' Club MedIT which associates students willing to improve their knowledge about medical informatics, artificial intelligence and using advanced computer methods in medicine. If you are interested, please contact the tutor: Jakub Rokicki (jakub.rokicki@wum.edu.pl).

Medical University of Warsaw has property rights, including copyright, to the syllabus. The syllabus may be used for educational purposes at the MUW only. Using of the syllabus for other purposes requires consent of the MUW.

ATTENTION

The final 10 minutes of the last class of the block/semester/year should be allotted for students to fill out the Survey of Evaluation of Classes and Academic Teachers
